6+ years in Android development	500K+ downloads of apps shipping my SDK	30K DAU on a real-time chat module	4M customers served by a POS system
---	---	--	---

SUMMARY

Senior Android engineer with 6+ years of experience building high-performance mobile applications and real-time systems. Deep expertise in Kotlin, Coroutines and scalable architectures, with a focus on performance optimisation, background processing and low-latency data handling. Experienced in developing SDK-level components, improving app stability – reducing ANRs and crashes – and designing efficient systems for high-load environments. I work on the CORE team, where I introduced an MDM solution that owns application security, and I drive AI adoption across the company – guidelines, multi-agent development and best practices for working with AI.

Key achievements

- Improved performance and responsiveness of real-time systems under heavy load
- Reduced UI latency and optimised rendering on complex screens
- Designed an SDK architecture used in apps with more than 500,000 downloads
- Built scalable messaging and data-processing systems
- Led development process and contributed to architectural decisions
- Introduced MDM on the CORE team – application security at platform level
- Drove AI adoption company-wide: guidelines, multi-agent development, best practices

EXPERIENCE

Senior Android Engineer

2024 – present

DION · CORE team

- I work on the CORE team: introduced MDM that owns application security
- Drove AI adoption across the company: guidelines for working with AI, multi-agent development, a shared set of best practices
- Led development of a real-time chat module serving 30,000+ DAU, focusing on scalability and low-latency updates
- Implemented asynchronous data flows with Kotlin Coroutines and Flow for efficient real-time data handling
- Designed and built secure encrypted storage for files and sensitive data
- Improved rendering performance of complex HTML content in WebView, removing UI inconsistencies
- Worked with background processing and lifecycle-aware components for reliable data handling
- Contributed to cross-project architectural decisions and system design

Kotlin · Coroutines · Flow · MDM · Encrypted storage · WebView · Multi-agent development

- Built real-time messaging features on top of WebSocket and gRPC
- Designed SDK-level architecture and API for integration into third-party apps — 500,000+ downloads
- Optimised chat performance for high-load scenarios: scroll smoothness and responsiveness
- Reduced memory usage and improved rendering efficiency on message-heavy screens
- Implemented local storage and file management systems for efficient media handling
- Built complex UI components with a focus on performance and smooth user experience

WebSocket · gRPC · SDK API · Jetpack Compose · Custom Views

- Built a mobile platform for managing housing and utility services and operational processes
- Implemented efficient data handling and UI updates for task and request management

MVVM · REST · Android SDK

- Built several Android applications from scratch across different domains
- Worked with Bluetooth, NFC and device-level integrations
- Built a POS system used in 400 stores, serving more than 4 million customers
- Gained hands-on experience in performance optimisation and the full mobile development cycle

Bluetooth · NFC · Java · Android SDK

TECHNICAL SKILLS

LANGUAGES	Kotlin · Java
ANDROID	Android SDK · Jetpack Compose · Custom Views
ARCHITECTURE	MVVM · MVI · Clean Architecture · Modularisation
CONCURRENCY	Kotlin Coroutines · Flow
NETWORKING	REST · WebSocket · gRPC
PERFORMANCE	UI optimisation · Memory management · Rendering
DATA	SQL · Local caching · File storage
SECURITY	MDM · Encrypted storage · Data protection
AI IN ENGINEERING	ChatGPT · Claude · GitHub Copilot · Guidelines · Multi-agent development · Best practices
OTHER	Firebase Cloud Messaging · Git

EDUCATION

BSc — Computer Engineering

NSTU named after R. E. Alekseev
2017 — 2021

Android Developer course

OTUS
2022 — 2023

LANGUAGES

Russian

English

native
